

Laser Induced Optical Pumping Measurements of Cross Sections for Fine and Hyperfine Structure Transitions in Sodium Induced by Collisions with Helium

Filesize: 8.98 MB

Reviews

Totally among the finest pdf We have possibly read through. It usually fails to price a lot of. I discovered this book from my i and dad suggested this pdf to learn.

(Michale Beier I)

LASER INDUCED OPTICAL PUMPING MEASUREMENTS OF CROSS SECTIONS FOR FINE AND HYPERFINE STRUCTURE TRANSITIONS IN SODIUM INDUCED BY COLLISIONS WITH HELIUM

BiblioGov. Paperback. Book Condition: New. This item is printed on demand. Paperback. 22 pages. Dimensions: 9.7in. x 7.4in. x 0.1in. Optical pumping of the ground states of sodium can radically alter the shape of the laser induced fluorescence excitation spectrum, complicating measurements of temperature, pressure, etc. , which are based on these spectra. Modeling of the fluorescence using rate equations for the eight hyperfine states of the sodium D manifolds can be used to quantify the contribution to the ground state pumping of transitions among the hyperfine excited states induced by collisions with buffer gas atoms. This model is used here to determine, from the shape of experimental spectra, cross sections for $(\Delta)F$ transitions of the $P(\text{sub } 3/2)$ state induced by collisions with helium and argon atoms, for a range of values assumed for the $P(\text{sub } 1/2)$, $(\Delta)F$ cross sections. The hyperfine cross sections measured using this method, which is thought to be novel, are compared with cross sections for transitions involving polarized magnetic substates, $m(\text{sub } F)$, measured previously using polarization sensitive absorption. Also, fine structure transition $(\Delta)J$ cross sections were measured in the pumped vapor, giving agreement with previous measurements made in the absence of pumping. This item ships from La Vergne, TN. Paperback.
