

## The Production of Elliptic Interferences in Relation to Interferometry Volume 2

Filesize: 5.52 MB

### **Reviews**

*This pdf might be really worth a go through, and far better than other. It can be packed with wisdom and knowledge Its been written in an exceedingly straightforward way and is particularly only soon after i finished reading through this pdf by which basically changed me, modify the way in my opinion.*

Rarebooksclub.com, United States, 2012. Paperback. Book Condition: New. 246 x 189 mm. Language: English . Brand New Book \*\*\*\*\* Print on Demand \*\*\*\*\*.This historic book may have numerous typos and missing text. Purchasers can download a free scanned copy of the original book (without typos) from the publisher. Not indexed. Not illustrated. 1912 Excerpt: . angle of refraction for light incidence at an angle  $I$ , or  $\sin I = \mu \sin R$ . In the former experiment  $\mu = 45$ . In view of the oblique position of the grating, however, the micrometer motion  $N$  of the opaque mirror introduces an additional displacement. Let  $N$  be the coordinate for this mirror. Then  $N = y - e \mu \sin R \tan R$ . (2) Hence the readings of the micrometer are determined by (subscripts  $c$  referring to centers of ellipses)  $e f, \dots, dn$  (3) The symbol  $n$  for index of refraction is resumed throughout the following paragraphs.  $t$  Publication No. 149, Carnegie Institution of Washington, 1911, p. 69.  $t$  Publication No. 149, Carnegie Institution of Washington, 44, p. 66 et seq., 1911. For the present purpose it is sufficient to assume and to take the  $E$  line as a standard of reference, whence Table 31, then, gives an exhibition of the quantities here in question, computed both for light crown glass,  $\mu = 0.456$ , in accordance with the data for  $n$  and  $X$  given in Kohlrausch's tables, and for the glass of the grating actually used,  $\mu = 0.48$ , as measured in the above paragraphs.  $A_{yc}$  and  $A_{Nc}$  refer to distances from the value corresponding to the  $E$  line.  $N_r, y_e$ , and  $X$  are in centimeters and the angle of incidence is  $45^\circ$ . Table 31.--Light crown glass.  $\mu = 0.456$ . Computed values of  $y$  and  $N$ . Measurements of  $N_c$  were now...
