

Micromachined Mirrors

By Robert Conant

Springer Dez 2002, 2002. Buch. Book Condition: Neu. 235x155x14 mm. This item is printed on demand - Print on Demand Titel. - 'Micromachined Mirrors provides an overview of the performance enhancements that will be realized by miniaturizing scanning mirrors like those used for laser printers and barcode scanners, and the newly enabled applications, including raster-scanning projection video displays and compact, high-speed fiber-optic components. There are a wide variety of methods used to fabricate micromachined mirrors - each with its advantages and disadvantages. There are, however, performance criteria common to mirrors made from any of these fabrication processes. For example, optical resolution is related to the mirror aperture, the mirror flatness, and the scan angle. Micromachined Mirrors provides a framework for the design of micromirrors, and derives equations showing the fundamental limits for micromirror performance. These limits provide the micromirror designer tools with which to determine the acceptable mirror geometries, and to quickly and easily determine the range of possible mirror optical resolution and scan speed.' 164 pp. Englisch.

Reviews

A brand new eBook with a brand new point of view. It is rally fascinating through reading through time period. You will like the way the article writer compose this ebook.
